libretools - Bug #388

[libremakepkg] copying existing source directories fails VCS package builds

2013-08-19 04:32 AM - mtjm

Status:	fixed	**% Done:**	100%
Priority:	bug		
Assignee:	lukeshu

Description

After a build of x264 from abslibre-mips64el when already having the source in $SRCDEST:

```
mv: cannot move '/var/lib/archbuild/default/mtjm/srcdest/x264' to '/home/mtjm/packages/sources/x26
4': Directory not empty
==> ERROR: (libremakepkg): An error has occurred. Exiting...
mv: cannot move '/var/lib/archbuild/default/mtjm/srcdest/x264' to '/home/mtjm/packages/sources/x26
4': Directory not empty
==> ERROR: (libremakepkg): An error has occurred. Exiting...
mv: cannot move '/var/lib/archbuild/default/mtjm/srcdest/x264' to '/home/mtjm/packages/sources/x26
4': Directory not empty
```

The same error occurs after every following package before that directory is manually removed. Each fullpkg run builds one package correctly, doesn't stage it and fails due to this error.

I **think** switching to the new devtools will fix this, but I'll check when I do it, and if not, I'll fix it.

#3 - 2013-09-14 05:58 PM - lukeshu

The devtools update fixed this.
