Maybe just remove it, first making sure that mplayer-libre works well?

Arch removed mplayer2 since it has no recent releases, <https://mailman.archlinux.org/pipermail/aur-general/2012-January/017281.html>, we would need to use a snapshot from git.

I recommend checking if there are needed features in mplayer2 not available in mplayer-libre and if it would be easier to make mplayer2 fast on the YeeLoong than mplayer-libre.
