Description			
grub legacy installs stage files too /usr/share/grub, but the grub-install script looks for them in /usr/lib/grub			

History

#2 - 2012-05-09 10:01 AM - lukeshu

Actually, it looks for them in /usr/lib/grub/i386-pc

The problem was install-grub file because installation AIF uses it when installs grub. so i fixed it, grub-0.97-21.2 is now available <https://projects.parabolagnulinux.org/abslibre.git/commit/?id=4228d4c60404755142c4e4f1c27c5df4f6d65816>

I found the issue on aif too. I fixed on there <https://projects.parabolagnulinux.org/aif.git/commit/?id=2cb8cbc5815b1e22c9a0b17aae7b8e56c477c00b> and now is necessary to wait that aif will do the files compress to update aif-libre.

Please see the lib-ui-interactive.sh file updated <https://projects.parabolagnulinux.org/aif.git/plain/src/core/libs/lib-ui-interactive.sh>

I checked some details, and the changes on AIF and install-grub was not necessary. So, I came back the changes to the original changes, and I fixed some parts on rePKGBUILD. After this, I updated grub to a new release grub-0.97-21.3 building via librerepkg and solves the problem :)

Now, Parabola Installation via netinstall works perfectly with grub
