Packages - Bug #1032

[ovmf] FatPkg is now free software

2016-06-12 01:03 AM - GNUtoo

Status:	fixed	**% Done:**	100%
Priority:	bug		
Assignee:			
Category:			

Description

Some packages such as ovmf (https://www.archlinux.org/packages/extra/any/ovmf/) uses fatpkg.

fatpkg was under a BSD license with some restrictions added on top. The restrictions made it non-free and have now been removed.

See https://rwmj.wordpress.com/2016/03/30/tianocore-uefi-now-has-a-free-fat-driver/ and https://github.com/jljusten/edk2/blob/fatpkg-open-source-v1/FatPkg/License.txt for more details.

This means that we can probably, by making sure we have the free version of fatpkg, reintroduce such packages in parabola.

Denis.

Do you know another package that could use fatpkg to begin check it?

#3 - 2016-07-03 02:19 PM - GNUtoo

Fatpkg is part of tianocore, and OVMF is a version of tianocore to be used on virtual machines such as qemu.

Denis.
