| <b>Description</b>   |                   |
| There seems to be a bug in the update script for ryzom. I get the following message:<br>rsync: failed to connect to <a href="http://www.ryzom.com">www.ryzom.com</a> (178.33.44.72): Connection refused (111)<br>rsync error: error in socket IO (code 10) at clientserver.c(125) [Receiver=3.1.2] |                   |
| Downgrading to rsync-3.1.1 produces the same issue.  |                   |

### History

#### #1 - 2016-06-25 04:47 PM - g4jc

They are moving towards non-free SteamOS integration and switched to a "Client Patcher" model, so the updater script you are attempting to use is more or less depreciated now.

There are unofficial binary builds mentioned on their "Mutual GNU / Linux" support forum with the new patcher and client program.

If you are able to help test, try building these two packages and report if you have any errors...

<https://aur.archlinux.org/cgit/aur.git/plain/PKGBUILD?h=ryzom-data>

<https://aur.archlinux.org/cgit/aur.git/plain/PKGBUILD?h=ryzom-client>

Due to limitations with my current ISP I am unable to download the sources which are nearly 3GB in size.

If the above PKGBUILD works we can remove the old ryzom-hg from PCR and update to the new one.
