Description Use OpenRC [0][1] as package base and keeps Systemd [2][3] package as optional choosing, because Systemd is bloatware [4][5][6][7][8][9][10] <ul style="list-style-type: none">• contains bootloader, with is useless on some hardware• imposes logind and journald and it can't be replaced with other software• contains systemd-networkd, that is useless• contains machinectl and others useless software• useful only with GNU/Linux (and glibc only), it's doesn't works with another future GNU variants such as GNU/Hurd, GNU/k*BSD*, etc.• it is an automated software, therefore there are stuff working as background processes [11] without user intervention• if the systemd is down, you need restart all the system. For further details: http://without-systemd.org/wiki/index.php/Arguments_against_systemd	

History

libretools uses systemd (systemd-nspawn)

#2 - 2017-04-14 02:30 AM - ebrasca

I like it.

Systemd contain binary logs.

I can't run libretools on openrc.
