| Description My webcam has worked previously without any issues. Now, since a few days or a week ago, it has stopped working. Cheese shows me "No device found". It doesn't work on browser either. Any ideas what could be wrong? Should some package be rebuilt or something? Thanks for any help! I'm happy to provide further information if you can tell me what and how. | |

Oh, there's a button on my laptop to disable/enable webcam. Apparently, I had disabled it at some point. Fixed. Sorry for the trouble, this can be closed.
