- Status changed from open to fixed

Enable [pcr] in /etc/pacman.conf, I have updated the YaCy package to latest version.

To run:
systemctl start yacy --> localhost:8090

#2 - 2016-09-30 12:44 PM - libreuser

What are the 'pcr' and 'nonprism' repo into the /etc/pacman.conf and why they are not activated by default?

#3 - 2016-09-30 01:41 PM - libreuser

Repositories Description: [https://wiki.parabola.nu/Repositories_%28Espa%C3%B1ol%29]

But, why the 'pcr' and 'nonprism' repo into the /etc/pacman.conf are not activated by default?

You should ask this question on the "dev" mailing list:

<https://lists.parabola.nu/mailman/listinfo>

It can be changed if enough people are interested. The reason I think is because pcr is community supported repo (not official libre package) and nonprism is more secure at the expense of features in each application.

#5 - 2016-10-01 12:19 AM - libreuser

I don't understand why a libre-software (GPL license) package, apparently respectful with user rights and stable (like 'yacy') is not available for all users. ☹☹

Maybe I should write it on dev@lists.parabola.nu.

Yes.

#7 - 2016-10-01 12:03 PM - libreuser

Thank you for the 'yacy' package. #LibreSearch
