- Subject changed from handbrake 1.0.1 crash on file opening to [handbrake] 1.0.1 version crash on file opening

#3 - 2017-01-12 01:00 AM - nom_de_plume

Please have a look at this:

<https://bugs.archlinux.org/task/51956>

https://lvm.org/bugs/show_bug.cgi?id=30587

Check the file in .config/ghb/Activity.log.[some number] for an error about llvm. If so this might be the issue. In my case, I did not have any of the libraries listed in the first link, but I did have mesa-libcl installed which was the source of the issue. When I uninstalled it, ghb opened files and did not crash.

The issue however is that imagemagick depends on mesa-libcl and emacs depended on imagemagick so I had to uninstall emacs and imagemagick as well to get this working.

- Assignee set to ovruni

The problem is mesa-libcl, use ocl-icd as opencl-icd-loader provider instead.

- % Done changed from 0 to 100

- Status changed from open to fixed

- Due date set to 2017-01-15

mesa-libcl was removed, use ocl-icd instead. You can re-install imagemagick and emacs
