actually is http://goblinartists.net ;)
I did some progress writhing about what packages are needed for multimedia support on Parabola GNU/Linux-libre here (
http://wiki.mediagoblin.org/User:Shackra/Multimedia#Installing_dependencies) (is my wiki page on GNU MediaGoblin!!)

Since I'm an actual translator of this project into Slovak language and a dedicated promoter, I'll take part in helping Jorge with possible future issues occurring within deployment and reliable running of GNU MediaGoblin instances.

PS: I urge you - other hackers - speaking with different languages to bring the native port of strings for your particular language in order to soar adoption rates or at least get an ordinary public informed. Thanks! (=
