

Packages - Bug #122

texlive-core-libre provides texlive-core without a version

Description texlive-core-libre provides texlive-core without a version. It should give a specific version (with either <= or = as appropriate - not sure). Why? Because pacman only satisfies versioned dependencies from provides if the provides are versioned too. I'm currently in this unfortunate situation: error: target not found: texlive-core>=2011.23170, but pacman -Qi texlive-core-libre ... Version : 2011.24722-1 Provides : ... texlive-core

I added specific version on provides line and updated it ==>

<https://projects.parabolagnulinux.org/abslibre.git/commit/?id=b31a8162aeddb5ef49a0702ff0fbb304b1a87f6d>

Please, update your system and try again.
