

Packages - Freedom Issue #1236

[apm] is useless without *atom* package

2017-03-17 02:44 PM - Anonymous

Status: not-a-bug	% Done: 0%
Priority: freedom issue	
Assignee:	
Category:	
Description As a side effect of chromium issues, the electron package was blacklisted. This broken the atom package. Thus, apm package become useless. I think that the apm package must be blacklisted too.

Thanks. It doesn't help that apm doesn't list atom as a dependency.
About how broken is apm now? It may be OK to keep it if there's any other use for it; after all it installs without atom.

- Status changed from open to not-a-bug

it may be useless, but it does not itself depend or recommend anything non-free (not even the atom editor); so there no imperative to remove it either

```
# pacman -Si apm | grep -E 'Repository|Depends|Optional'
Repository      : community
Depends On      : libsecret nodejs>=10 npm python2
Optional Deps   : None
```

```
# pacman -S apm
