

Packages - Bug #1248

Some packages still refer to the "gallium" libva driver.

Description			
ArchWiki tells me that since mesa (or rather, libva-mesa-driver) 12.0.1, the name "gallium" (as in /usr/lib/dri/\${name}_drv_video.so) is no longer used. However, things still try to load it. Probably something needs recompiled, or something in [libre] needs a patch that Arch applies.
