[iceweasel][icedove] Branding files are in plain tar archive despite xz file extension

2017-04-05 03:32 AM - jdoe

Status: fixed	% Done: 100%
Priority: bug	
Assignee:	
Category:	
Description The tar archive for branding files (iceweasel_52.0-1.branding.tar.xz) is actually a plain tar archive despite the xz file extension. While this doesn't affect the resulting Parabola package, it may confuse some tools ¹ if the file is used elsewhere. It also increased the size of the archive by 10 times compared to the previous version. [1]: For example, Gentoo's Portage will fail to automatically extract the file if it were used in an ebuild.
