

Packages - Bug #1316

[libre/jquery] let's burn it.

Description libre/jquery is vastly outdated, was last build in 2015 and nobody bothered to mark it as out of date, which makes me think it is unused. What is our policy for such packages? I would suggest that it could probably go away, and nobody would notice. ok to burn? (the same probably applies for libre/jquery-ui)
