

Packages - Bug #1363

nonprism/gthumb needs a rebuild

2017-06-06 01:28 PM - freemor

Status:	fixed	% Done:	100%
Priority:	broken		
Assignee:			
Category:			
Description			
The currently available package exits before launch with the error.			
<ul style="list-style-type: none">(gthumb:4): CRITICAL **: Could not load the mandatory extension 'cairo_io': Could not open the module `cairo_io`: libwebp.so.6: cannot open shared object file: No such file or directory			
I tried rebuilding from abslibre and that fixed the issue (assuming it just needed to be built against an updated cairo)			
I unfortunately Don't know how to do that at the Paraboa server side of thing.. Thus thus bug report

- Status changed from open to fixed

This is a year old.. tested the latest gthumb it works fine. Thus it this must have been done at some point. So marking it as fixed.
