speech-dispatcher: uses 100% CPU after a random amount of time

2012-06-16 01:09 PM - migathesecond

Status: not-a-bug	% Done: 0%

Description	
<p>I'm not sure if this is even a Parabola issue, as I've heard about it happening on other distributions. Basically, after using any program with speech-dispatcher for any long period of time, after a while, speech-dispatcher will stop working and will start using up almost all of the CPU. The only program that I use that basically requires speech-dispatcher is a version of Mumble from AUR that enables speech-dispatcher support, as the text-to-speech can be extremely useful for me. I could just go back to the standard version for now, but this is a feature that I really like having whenever it works.</p> <p>Hopefully a little bit more useful information, I looked at dmesg after speech-dispatcher had stopped working and found this: [6127.688905] sd_espeak[899]: segfault at 7f5fdc040000 ip 00007f5ff005ba30 sp 00007f5febbf1b78 error 4 in libc-2.15.so[7f5feff35000+197000]</p>

Rebuild it with debug symbols and get a backtrace?

Hopefully a little bit more useful information, I looked at dmesg after speech-dispatcher had stopped working and found this:
[6127.688905] sd_espeak[899]: segfault at 7f5fdc040000 ip 00007f5ff005ba30 sp 00007f5febbf1b78 error 4 in libc-2.15.so[7f5feff35000+197000]

speech-dispatcher is a package from Archlinux, I think that is necessary that you report it to Arch Linux Bugs website
