Category:	
Description Hello, with the latest version of the metapackage XFCE4 there are problems with sliders within the plugins for panels: When trying to adjust volume or energy-level for example the complete dialog just disappear. Tested with two different systems installed: Both show up this error. Could you please look behind if this can be fixed? Thanks!

Bump. Same issue.

#2 - 2017-08-10 06:26 PM - isacdaavid

our only custom XFCE-related package is libxfce4ui (absent among xfce4 group members), which seems to be on par with Arch's equivalent. could you confirm that this issue is not being imported from Arch? i don't know where else to look

I tried on an other laptop running Arch, the same issue occurs.

[fablamar78](#): Thanks for clearing up! :)

#5 - 2017-08-13 09:01 PM - through

Solved with a downgrade to GTK 3.22.9!

#6 - 2017-08-13 10:02 PM - isacdaavid

- Status changed from open to forwarded upstream

#7 - 2018-01-18 12:29 PM - oaken-source

- Status changed from forwarded upstream to fixed

this appears to be fixed by upstream.
