Description			
Hello everyone,			
I am running Archlinux and wanted to adapt/replace a few of my packages with the ones from parabola (e.g. [libre] "iceweasel" or packages from [nonprism]).			
Today I installed "gnome-settings-daemon" and "gnome-online-account" from [nonprism] and afterwards removed "geoclue2". After a reboot my GDM login screen wouldn't load. I had to re-install "gnome-settings-daemon" from Arch's [extra] repo to fix the issue (which also installed "geoclue2" as dependency).			
Maybe the problem is caused because "gnome-settings-daemon" in Arch's [extra] repo is version 3.24.3-2 while [nonprism] is 3.24.2-1 ?			
Is there anything I can do to help debugging this issue?			
I know that I am not a full parabola user but still hope for your help.			
Thanks in advance !

re this patch: <https://lists.parabola.nu/pipermail/dev/2019-August/007401.html>

does this issue still exist theova?

#3 - 2019-11-03 01:32 PM - bill-auger

- Subject changed from nonprism/gnome-settings-daemon breaks GDM/GNOME to [nonprism/gnome-settings-daemon]: breaks GDM/GNOME

#4 - 2019-11-03 01:35 PM - bill-auger

i have coupled this issue and another to [#1884](#) - gnome has always been troublesome for nonprism - im not sure what can be done
