Description

Hi, after trying to run pacman -Syu i get the following errors:

```
:: Proceed with installation? [Y/n]
(96/96) checking keys in keyring
#####] 100%
downloading required keys...
error: key "4A1AFC345EBE18F8" could not be looked up remotely
error: required key missing from keyring
error: failed to commit transaction (unexpected error)
Errors occurred, no packages were upgraded.
```

I ran pacman -S parabola-keyring:

```
:: Processing package changes...
(1/1) reinstalling parabola-keyring
#####] 100%
> Appending keys from parabola.gpg...

> Importing owner trust values...
> Updating trust database...
gpg: next trustdb check due at 2017-09-21
:: Running post-transaction hooks...
(1/1) Arming ConditionNeedsUpdate...
```

, then pacman-key --refresh-keys, but got the following errors while refreshing keys:

```
[parabool@thinkpad ~]$ sudo pacman-key --refresh-keys
gpg: refreshing 125 keys from hkp://pool.sks-keyservers.net
gpg: keyserver refresh failed: Server indicated a failure
==> ERROR: A specified local key could not be updated from a keyserver.
```

Removing parabola-keyring with pacman -Rd gives the following error:

```
[parabool@thinkpad ~]$ sudo pacman -Rd parabola-keyring
checking dependencies...
error: failed to prepare transaction (could not satisfy dependencies)
:: pacman: removing parabola-keyring breaks dependency 'parabola-keyring'
```

```
error: key "4A1AFC345EBE18F8" could not be looked up remotely
```

the solution won't even involve parabola-keyring. [5EBE18F8](#) is a sub-key of recent creation (~2 months) belonging to an Arch packager.

Removing parabola-keyring with pacman -Rd gives the following error:

```
[parabool@thinkpad ~]$ sudo pacman -Rd parabola-keyring
checking dependencies...
error: failed to prepare transaction (could not satisfy dependencies)
:: pacman: removing parabola-keyring breaks dependency 'parabola-keyring'
```

this is expected behaviour. -Rd only skips version checks, -Rdd does what you wanted.
