<b>Category:</b>	
<b>Description</b> Trying to run Surf or other browsers that depend on nonprism/webkit2gtk fail due to: error while loading shared libraries: libcui18n.so.59  I did a simple makepkg from the existing nonprism/webkit2gtk (against the now installed icu 0.60) and now surf works fine. So just needs a rebuild. This will probably fix other packages that depend on webkit2gkt also.
