Packages - Bug #1564

systemd update results in kernel panic and breaks the system on armv7h

Description

Updating systemd to 235.38-2 on armv7h fails with the following:

```
( 62/387) mise à jour de systemd                    [####################] 100%
/tmp/alpm_7NWxWV/.INSTALL : ligne 13 :  5998 Erreur de segmentation  (core dumped)systemd-sysusers
[ 1315.153535] Kernel panic - not syncing: Attempted to kill init! exitcode=0x0000008b
```

Then, the next reboot doesn't go through to the end and hangs, leaving the systemd in an unusable state.

I have tried rebuilding the systemd packages from abslibre, it doesn't help with anything.
