Description

Really nice alternative to Baskerville. Thought it was already in the PCR but it doesn't seem to be.

Description: Libre Baskerville is webfont optimized for web body text (typically 16px). It's based on 1941 ATF Specimens, but it has a taller x height, wider counters and minor contrast that allow it to work on small sizes in any screen.
License: SIL Open Font License Version 1.1 (download the 1.0 package from the impallari website, the font license is in there).
