<b>Description</b>	
Hi, when upgrading systemd (from a systemd that is older than the one from <a href="#">#1553</a> ) I get:	
<pre>(44/62) upgrading systemd [#####] 100% systemd-sysusers: error while loading shared libraries: libcryptsetup.so.4: cannot open shared object file: No such file or directory journalctl: error while loading shared libraries: libcryptsetup.so.4: cannot open shared object file: No such file or directory systemctl: error while loading shared libraries: libcryptsetup.so.4: cannot open shared object file: No such file or directory</pre>	
libcryptsetup is part of the cryptsetup package.	
On ARM it is at version 2.0.0-1:	
<pre>core/cryptsetup 2.0.0-1 (base) [installed]   Userspace setup tool for transparent encryption of block devices using   dm-crypt</pre>	
whereas on i686 it is at 1.7.5-2:	
<pre># pacman -sS cryptsetup core/cryptsetup 1.7.5-2 (base) [installed]   Userspace setup tool for transparent encryption of block devices using dm-crypt</pre>
