

libretools - Bug #16

[librechroot] cleaning should take of build dependencies

2012-02-27 06:10 PM - fauno

Status:	fixed	% Done:	100%
Priority:	feature		
Assignee:	fauno		
Category:			
Description			
Currently we run `makepkg -s` on the build chroot to solve dependencies and run `chcleanup` to remove any package that was left out after building. But when you package with `treepkg` many packages share the same build dependencies, that get installed and uninstalled over and over.			
Treepkg should manage build dependencies in a way that installs build dependencies for a PKGBUILD while removing not needed.

This should be implemented on librechroot. There should be an option for adding a PKGBUILD's deps on \$chrootdir/cleansystem.

I'm changing the title to reflect that.

#4 - 2012-09-22 04:20 PM - fauno

Added it to `chcleanup` and is run as a hook by `treepkg`. It's on the "smart-cleanup" branch of libretools.git
