<b>Description</b>	
I have the following packages installed:	
acpi_call-lts-1.1.0-53.parabola1.basekernel4.9 linux-libre-lts-4.9.75_gnu-1	
During boot the systemd-modules-load service fails with the following message in the logs:	
Jan 13 19:19:46 tiger systemd-modules-load <sup>464</sup> : Failed to insert 'acpi_call': Invalid argument	
See also the following output for more details:	
<pre>\$ dmesg   grep acpi_call [ 18.936892] acpi_call: loading out-of-tree module taints kernel. Any ideas what is wrong? Should the acpi_call-lts package be updated?
