[icedove] Connecting to IRC results into a segfault

2018-02-13 03:47 PM - Megver83

Status: open	% Done: 0%
Priority: bug	
Assignee: oaken-source	
Category:	
Description	
<p>I'm running the latest [nonprism] version of Icedove (1:52.6.0-2.nonprism1), and when connecting to IRC it ends into a Segfault (don't know if it happens with the rest of the nets like XMPP and the PRISM ones):</p> <pre>\$ icedove [calBackendLoader] Using Thunderbird's builtin libical backend Segmentation fault</pre>	
<p>However this happens on the [libre] version too, right when the account connects. Recompiling might fix this (I've not tried that, however).</p>

okay, I can reproduce this.

I will check whether the problem also exists in upstream, and try to pinpoint the issue.

#2 - 2018-03-14 07:09 PM - Megver83

Something important to mention is that it curiously works, but it crashes just when I open the chat tab.
