Packages - Bug #1640

[icedove] Connecting to IRC results into a segfault

2018-02-13 03:47 PM - Megver83

Status:	not-a-bug	**% Done:**	0%

Description

I'm running the latest [nonprism] version of Icedove (1:52.6.0-2.nonprism1), and when connecting to IRC it ends into a Segfault (don't know if it happens with the rest of the nets like XMPP and the PRISM ones):

```
$ icedove
  [calBackendLoader] Using Thunderbird's builtin libical backend
  Segmentation fault
```

However this happens on the [libre] version too, right when the account connects. Recompiling might fix this (I've not tried that, however).

History

#1 - 2018-02-15 08:42 AM - oaken-source

okay, I can reproduce this.

I will check whether the problem also exists in upstream, and try to pinpoint the issue.

#2 - 2018-03-14 07:09 PM - Megver83

Something important to mention is that it curiously works, but it crashes just when I open the chat tab.

#3 - 2020-12-15 02:21 PM - oaken-source

- Status changed from open to not-a-bug

closing as stale.
