Description	
<p>This is more an enchantment related on pacman (or better, to libalpm, I'm working on it) but there is a trick to make it work on pacman without modification (see https://bugs.archlinux.org/task/20056?project=3)</p> <p>the step are:</p> <ul style="list-style-type: none">- run pacman Sup to get the list of all the package that need to be downloaded download them in the cache folder of pacman (im thinking on parallel with torrent + webseed)- run pacman -Syu (eventual missing package released during download of the rest of the package may happen) <p>Stay updated with pacman issue to know when and if i will release the pull request for native parallel download; Im having some issue with the internal CURL, so it could be that i will enable only when using Xfercommand</p>	

History

#1 - 2018-02-25 04:00 PM - lesto

wrong package, moved to <https://labs.parabola.nu/issues/1649>

#2 - 2018-03-12 09:06 PM - ovruni

- Status changed from open to not-a-bug
