<b>Description</b>	
<p>This is more an enchantment related on pacman (or better, to libalpm, I just release for comment a patch) but there is a trick to make it work on pacman without modification (see <a href="https://bugs.archlinux.org/task/20056?project=3">https://bugs.archlinux.org/task/20056?project=3</a>)</p> <p>a systemd Timer or Chron start the script:</p> <ul style="list-style-type: none"><li>• run pacman -Sup to get the list of all the package that need to be downloaded</li><li>• download them with pacman2pacman-get</li><li>• run pacman -Syu (eventual missing package released during download of the rest of the package may happen, so leaving pacman2pacman-get as XferCommand is suggested)</li></ul> <p>Stay updated with pacman issue to know when and if my patch to call xpercommand in parallel will be accepted</p>
