libretools - Bug #1695

[libremakepkg] Handles environment variables differently than makepkg

2018-04-07 09:39 PM - lukeshu

Status:	open	**% Done:**	0%
Priority:	discussion

Description
libremakepkg always follows PKGEXT from $copydir/etc/makepkg.conf; and ignores the environment variable. The environment variable should act as an override.

History

#1 - 2018-04-09 05:03 PM - lukeshu

- Subject changed from [libremakepkg] Doesn't respect PKGEXT from the enviroment to [libremakepkg] Handles environment variables differently than makepkg

Upon further reflection, I'm not sure it should. It doesn't obey MAKEPKG_CONF, CARCH, GPGKEY, SRCEXT, PKGEXT, or PACMAN. And the handling of MAKEFLAGS isn't correctly described in the docs.

What does obeying CARCH look like? What does obeying PACMAN look like?
