Description blender is not working with current update and tells me in the terminal : "blender: error while loading shared libraries: libOpenImageIO.so.1.7: cannot open shared object file: No such file or directory" as i can see it is dependency problem happen sometimes between updates is not hard to fix for you (the package maintainer) but i suggest to make a portable version of blender libre which has all the libs and dependencies inculded (i did try to do this but i faild to build blender from source i you could do this it will help alot)
