

Packages - Freedom Issue #1756

[wordpress] Relies on non free Javascript

2018-04-24 06:38 AM - ani

Status: not-a-bug	% Done: 0%
Priority: freedom issue	
Assignee:	
Category:	
Description I have a wordpress installation on my VPS and I cannot update or upgrade it from the admin interface since it seems to rely on non free Javascript for that functionality to be there.

this one seems to have slipped through the cracks - how do know it has non-free Javascript? - we would need some concrete example to move forward

This was ten months ago. I can't remember any details but I think that I had LibreJS installed and it blocked that admin functionality in Wordpress.

If Wordpress has LibreJS incompatible free Javascript code then I was confused by that fact.

Also note: My VPS is running Debian.
