Category:				

Description

OpenVPN isn't capable of handling DNS server push information in GNU/Linux without the help of external scripts like

```
/etc/openvpn/update-resolv-conf
```

Trisquel and other debian based distribution ship this file in the openvpn package :

However arch and Parabola don't have such file in the OpenVPN package.

However there is a PKGBUILDS for this file available here:

- https://aur.archlinux.org/packages/openvpn-update-resolv-conf-git/
  and a pkgbuild for an alternative script using systemd here:
- https://aur.archlinux.org/packages/openvpn-update-systemd-resolved/
