| Description When trying to download the pacman mirrorlist via https://www.parabola.nu/packages/libre/any/pacman-mirrorlist/download as shown on https://wiki.parabola.nu/Migration_from_Arch , you are redirected to a 404 error page with the URL https://repo.parabola.nu/libre/os/armv7h/pacman-mirrorlist-20171221-1.parabola1-any.pkg.tar.xz . Instead, the page should redirect to the updated mirrorlist at https://repo.parabola.nu/pool/parabola/pacman-mirrorlist-20180712-1.parabola1-any.pkg.tar.xz . | |

download links on parabola.nu/packages are broken, probably due to bug [#880](#). on top of that, [#1666](#) led to the disappearance of arch=(any) packages from the web.

the solution is to download the file directly from a mirror, as in

```
pacman -U https://repo.parabola.nu/pool/parabola/pacman-mirrorlist-20180712-1.parabola1-any.pkg.tar.xz
```

I have updated the migration guides to reflect the most recent fallback links.
