[xorg-server] Crash

2018-07-20 05:33 AM - ani

Status: not-a-bug	% Done: 100%
Priority: bug	
Assignee:	
Category:	
Description Attaching log file. I just started X with systemctl start lightdm.	

History

#1 - 2018-07-21 07:33 AM - ani

Mind you, this bug is preventing me from running a graphical interface on a computer. I would say it is critical/severe.

#2 - 2018-07-21 12:56 PM - freemor

More info is required to help us help you

What Machine? X86_64? i686, i386

What Videocard (I can guess from the xorg log that it is an ATI R600, but what if xorg is identifying the card all wrong?)

Does this card work with other live libre distros?

Does this card work with the current lxde_dual live Parabola iso?

#3 - 2018-07-21 03:03 PM - ani

64-bit Intel i-generation.

AMD Radeon HD 5770.

I don't know.

I don't know.

#4 - 2018-07-21 03:31 PM - freemor

As some AMD cards are problematic (Require non free firmware to function fully) with libre software. Please try with a couple of libre live DE ISOs (Parabola, Trisquel) and see if they can reach a graphical environment.

This will help us pin down Hardware issue / configuration issue / actual bug in Parabola

#5 - 2018-07-21 03:39 PM - ani

Well obviously a Parabola xorg-server bootup would result in the same thing. What if I boot Trisquel tomorrow?

#6 - 2018-07-21 05:42 PM - ani

I just booted Trisquel 8.0 MATE Edition and X seems to boot fine.

#7 - 2018-07-21 06:25 PM - freemor

Good to know.

Can you please send a copy of the xorg log from Trisquel for Comparison.

Thanks.

#8 - 2018-07-22 07:09 AM - ani

- File Xorg.0.log added

Trisquel 8.0 x86_64 MATE.

#9 - 2018-07-26 07:14 AM - ani

I get this error on a different machine too, same graphics card.

#10 - 2018-07-26 01:02 PM - freemor

- % Done changed from 0 to 100

- Status changed from open to not-a-bug

Asked user to install xf86-video-ati and vulkan-radeon. on IRC

They reported the problems as fixed. So not a bug but rather improper system configuration
Making this as Invalid and closing.
