fix what?

#2 - 2018-07-23 06:20 PM - Anonymous

My bad.The problem was with actually using the this software to resolve a domain.I could not do that and I had to remove the socket file and any related ssystemd files as recommended on the dnscrypt-proxy's issue tracker then I ran: "dnscrypt-proxy -service install" It can still be used but the update is just easier I think.And it seems this update has not been applied to i686 systems.

#3 - 2022-05-08 08:42 PM - Zuss

This bug may have been fixed since then. Looking at the mentioned bug report it has been resolved with a patch.
