<b>Description</b>	
When I install a fresh XFCE Parabola GNU/Linux system I am always presented with a terminal font that is cramped so much it is hard to read.	
Install Parabola and xfce4 then launch a terminal in XFCE.	

#### History

##### #1 - 2018-08-03 09:38 PM - freemor

Installed xfce4 in a VM. terminal fonts look fine (1280x800)

Is your system configured correctly?

What further information can you provide?

##### #2 - 2018-08-04 06:33 AM - ani

The three systems are pacstrap installed with xfce4, xorg and xf86-video-ati added as additional packages. I get the same results in each of them.

##### #3 - 2018-08-04 08:32 AM - christian

I'll note that I get this issue on fresh installs too, installing ttf-dejavu fixes it.

##### #4 - 2018-08-04 12:51 PM - freemor

Please try christian's suggestion of installing: ttf-dejavu

When reporting display issues it is always best to mention monitor/video card/drivers in the initial bug report.

In what is installed you do not mention: libva-intel-driver or mesa

Both of which is important for video acceleration. please make sure that they are installed.

Doing so may also help with [#1930](#)
