Description

After systemd political changes, (systemd-tools was removed and included into systemd package) libretools removes linux-libre when clean packages before building.
cleansystem file should be update replacing systemd-tools to systemd on the list.

Isn't this done by the update-cleansystem script? I think a long term solution would be for librechroot to determine which packages are needed, i.e. are dependencies of packages listed in libremkchroot, depends or makedepends of the current PKGBUILD.

Thanks mtjm, cleansystem bug was solved by update-cleansystem command , but i had to enter via librechroot to install linux-libre package manually.

update-cleansystem should install missing packages too. working on this on the smart-cleanup branch

#6 - 2012-11-27 07:40 PM - lukeshu

The cleansystem file is no longer used. FIXED.
