

Packages - Bug #1990

[reflector] no mirrors found

2018-09-15 08:23 AM - willspoke

Status: fixed	% Done: 0%
Priority: bug	
Assignee: ovruni	
Category:	
Description reflector had not been working when the parabola homepage was down. 404 errors were appearing back then. Since the homepage is back up, I am now connecting, and using command: reflector --verbose --latest 200 --protocol https --sort rate --save /etc/pacman.d/mirrorlist but receiving the error: [2018-09-15 09:17:21] WARNING: no mirrors selected for rating error: no mirrors found Is this an error that I am causing, or does it have anything to do with the parabola homepage connecting to mirrors? Many thanks in advance for looking at this.

looks like this part of the recently moved site isn't alive yet.

If you look at: <https://www.parabola.nu/mirrors/status/>

You'll see it is unpopulated.. They probably just forgot a cronjob for a script or something simple like that,

Thank you for this information. I will be on standby, until that part of the site is up again.

#3 - 2018-09-22 08:55 AM - mzo

Reflector works correctly now. Please close this issue.
