Description steps to reproduce. install lxdm-gtk3 on i686 systemd system reboot never reach login screen no visible error launching X or X running lxsession manually all work fine switching to lxdm (non-gtk3) with pacman -S lxdm alleviates the problem. testing yesterday lxdm-gtk3 was failing out with an "exit code: 1" message in the log. Today is seems to just hang. Had to CTRL-C to stop strace.
