Description			
Hi, when I run pulseview I have that:			
<pre>\$ pulseview pulseview: error while loading shared libraries: libpython3.6m.so.1.0: cannot open shared object file: No such file or directory</pre>			
While I have sigrok-cli compiled aside, pulseview is from parabola packages and doesn't use any /usr/local libraries:

History

Considering the python related breakage, and given the fact that pulseview runs fine on my X86_64 machine. I'm guessing you are coming from i686, yes?

#2 - 2018-09-27 01:18 AM - freemor

- Priority changed from bug to broken

Yes this is an issue for i686

As both python3 and pulseview are upstream I'm uessing someone just forgot the rebuild pulseview as it is a slightly more obsucre program

I'll set up an arch linux 32 VM tomorrow and test it there. If the problem lives there I'll push this upstream

It works now
