Description	
this is the current list of 'icu' dependents for x86_64 systems - each time 'icu' is upgraded in arch, each of these packages should be rebuilt against the upgraded 'icu', with sodeps for each 'icu*.so', then the 'icu-parabola' package should be upgraded to the same version as arch	
the list is of course subject to change - the attached files can be used to generate the current list

Looks like phantomjs is also broken:

```
% pacman -Syu
[... ]
installing icu (63.1-2) breaks dependency 'icu<63' required by phantomjs
```

And of course building iceweasel fails.. starting icecat rebuild while taking a look at what's borked with iceweasel.

Just to be clear. The plan I'm working from is:

Rebuild existing versions against icu 63:

Works -> Release

Fails -> is fix trivial?

yes -> fix and release current version

no -> Consider updating to latest version, fix PKGBUILD, fix patches, build, fix bug, rebuild, etc.. release when all is said and done

- % Done changed from 0 to 10

Iccat rebuilt and released
starting libre/icedove
