Description I have two applications that are failing to remember things like window size or border positions across launches. One is Hexchat that cannot remember where I pull the border that separate channel chat from userlist. The other one is Gajim that won't remember the size of the main chat window. local/hexchat 2.14.2-1.parabola1 A popular and easy to use graphical IRC (chat) client, without nonfree browser reference local/gajim 1.1.0-1 Full featured and easy to use XMPP (Jabber) client I'm running on 64-bit arch. I've tried to get in touch with tech support but failed for several days.

update to hexchat may fix the losing of window position please check and let me know

#2 - 2019-02-22 03:11 PM - bill-auger

hexchat is issue [#2163](#)

are you still having trouble with gajim ani ?

[bill-auger](#)

I tested gajim before and it had trouble staying the same size between restarts. When I check now, it seems to remember window size except when it is unmaximized and pulled out to cover the entire space, on restarting the program it is maximized again.
