Description quote from irc: 21:52 < elibrokeit> oaken-source: you could make the pacman cache more permanently empty, if you add the directories from the mirror server as additional CacheDirs 21:52 < elibrokeit> e.g. arch infra has: 21:52 < elibrokeit> CacheDir = /var/cache/pacman/pkg/ 21:52 < elibrokeit> CacheDir = /srv/ftp/pool/packages/ 21:52 < elibrokeit> CacheDir = /srv/ftp/pool/community/ I propose that we do something similar on winston, which would save us around half a gig of storage on the root partition
