

Packages - Bug #2122

Qt failure with testing repository

2018-12-23 11:15 AM - Anonymous

Status: not-a-bug	% Done: 0%
Priority: bug	
Assignee:	
Category:	
Description When using testing repo with latest updates, any Qt application will return: "Cannot mix incompatible Qt library (version 0x50b02) with this library (version 0x50c00)" and SIGABRT will be sent.

the [*testing] repos should normally not be used, unless you have a very specific reason to. even then, it would be only a temporary situation

so, this is not a bug. the [*testing] repos are not intended to be stable or sane. i.e. it is not wise to run `pacman -Syu` while any * testing repo is enabled

if you have gotten yourself into trouble doing so, you will need to disable the [*testing] repos, then re-install or downgrade any packages you installed from these repos, in this case, it must have been some QT lib

#2 - 2018-12-24 05:49 AM - bill-auger

i redact that previous comment - after some discussion, i learned that the arch testing repos are intended to be sane and usable by everyone; though i would still contend that they should normally not be used, unless there is a very specific (temporary) reason to - so, the previous comment is entirely true only for the dev's personal repos (i.e. [~lukeshu]) - i do think that some of the parabola devs (at least myself with [pcr-testing]) were treating them as experimental; but i dont think that is the cause for this particular bug report

the parabola mission statement says we should strive to stay as close to arch as possible - so this would be a legitimate bug

it was suggested that, in this case, the problem would clear up with a `pacman -Syu` re-sync or maybe you have some custom packages (e.g. from the AUR) that were built against an older QT version

#4 - 2018-12-24 03:00 PM - bill-auger

temporaryuser -

there are currently no QT libs in any testing repo

https://www.parabola.nu/packages/?sort=&arch=x86_64&repo=Community-Testing&repo=Kernels-Testing&repo=Libre-Multilib-Testing&repo=Libre-Testing&repo=Multilib-Testing&repo=Nonprism-Multilib-Testing&repo=Nonprism-Testing&repo=Pcr-Multilib-Testing&repo=Pcr-Testing&repo=Testing&q=&maintainer=&flagged=

do you still have a problem after running `pacman -Syu` ?

did you install any packages from AUR ?

which testing repo are you using ? - there are several

- testing
- libre-testing
- community-testing
- pcr-testing
- pcr-multilib-testing
- kernels-testing
- multilib-testing
- libre-multilib-testing
- nonprism-testing
- nonprism-multilib-testing

why exactly are you using any testing repo? - what are you trying to accomplish?

#5 - 2018-12-25 07:29 AM - Anonymous

The issue disappeared.
