Description	
Hi,	
The repositories armv7h, i686 and x86_64 have linux-libre 4.20:	
<pre># pacman -sS ^linux-libre\$ libre/linux-libre 4.20_gnu-1 (base base-openrc) [installed] The Linux-libre kernel and modules</pre>	
Doing 'pacman -S linux-libre' also shows that the 4.20_gnu-1 version will be installed.	
However the linux-libre PKGBUILD which is in libre only mention the 4.19-gnu version at the time of writing.
