

Packages - Freedom issue #2171

[supercollider]: requires 'qt5-webengine'

2019-02-06 06:55 AM - bill-auger

Status: forwarded upstream	% Done: 0%
Priority: freedom issue	
Assignee: GNUtoo	
Category:	
Description denis has a PKGBUILD for [libre] already from the git log: <pre>To avoid qt5-webengine, this package has been built without QT support. QT support was used for the IDE and a GUI, which may be able to work without qt5-webengine if supercollider is patched.</pre> <pre>Supercollider can also be used as a dependency of other packages that are not yet in Parabola such as sonicpi.</pre>

the upstream may make the 'qt5-webengine' dependency optional

<https://github.com/supercollider/supercollider/issues/4010>

#3 - 2019-02-06 10:43 AM - bill-auger

- Assignee set to GNUtoo

#4 - 2019-02-07 11:16 AM - bill-auger

- Description updated

#5 - 2019-02-14 05:28 AM - GNUtoo

- Status changed from open to fixed

It's now built without qt5-webengine support.

#6 - 2019-02-14 05:34 AM - bill-auger

GNUtoo do you have a github account? - as far as im concerned, this should be marked as "forwarded upstream" for now - until we know how the upstream plan to address it - could you post to the upstream BR and explain what you did and ask if it is similar to their plan - that could avoid forever patching something that will have a proper configure switch in the next version

#7 - 2019-08-01 04:23 AM - bill-auger

- Status changed from fixed to forwarded upstream

a cmake option 'SC_USE_QTWEBENGINE' was added upstream - it looks like it is slated for the 3.10.3 release - once that hits arch, we can remove the parabola patch and use the configure switch

```
$ cmake ....
-DSC_USE_QTWEBENGINE=OFF
....
```

<https://github.com/supercollider/supercollider/pull/4328>

i also asked david from the arch-proaudio team about this, and he is considering to make a -nowebengine arch package
