<b>Description</b> "A git credential helper implementation that allows using pass as the credential backend for your git repositories. This is achieved by explicitly defining mappings between hosts and entries in the password store."  License: LGPL-3.0  source: <a href="https://aur.archlinux.org/packages/pass-git-helper/">https://aur.archlinux.org/packages/pass-git-helper/</a>  AUR: <a href="https://aur.archlinux.org/packages/pass-git-helper/">https://aur.archlinux.org/packages/pass-git-helper/</a>  If there is another good credential backend (or a completely other way to do handle the credentials), please let me know.  Thank you.
