- Description updated

#3 - 2019-11-03 10:22 AM - theova

- File PKGBUILD added

It is possible to build radare2-cutter without qt5-webengine: <https://github.com/radareorg/cutter/issues/567#issuecomment-403387659>

I was able to build radare2-cutter on x86_64. However the builds on arm and i686 failed.
A librefied PKGBUILD is attached.

gj theova -

did you install the package and run the program?
it works acceptably?

#5 - 2019-11-03 11:46 AM - theova

yes, I installed it and run it.

Although I have not used it to much yet, I see no problems...

[theova](#)

can you send this PKGBUILD to the dev list - maybe oaken-source
will look at it

#7 - 2022-09-22 05:25 PM - gap

iaito (formerly radare2-cutter) was forked into rz-cutter.
Work on iaito appears to be less active than rz-cutter, and the package shares many of the problems from [#3142](#).
As iaito is so similar to rz-cutter, work appears to be lagging behind rz-cutter, and maintaining the package would require essentially a duplication of effort, I am tempted to suggest we should drop it, but I don't think showing preference for one fork over the other is a good idea.
I think the ideal solution is for them to merge again, hopefully sooner rather than later, before one of the forks dies.

[bill-auger](#)

How do you feel about giving iaito the same treatment as rz-cutter?

iaito also appears to be duplicated in i686/community/r2cutter, armv7h/community/r2cutter, and armv7h/community/radare2-cutter.

I presume these are imported from Arch32 and ArchARM.
